

Arctech Solar Ranked No. 5 Global Tracker Supplier in IHS' 2016 Markit Report

(1 April, 2017) International authoritative research institution IHS recently released a 2016 global tracker supplier shipment ranking list named "Global PV tracker structural BoS supplier market shares - 2016", in which Arctech broke into the top 10 ranking for the first time with a remarkable ranking of No.5, making it the first Chinese tracker manufacturer that ever entered Global TOP 10 list.

The outstanding performance of Arctech Solar in international market and its consequent ranking of No. 5 on the list made it the most unexpected "dark horse" in PV tracker field in 2016. Arctech Solar just published its historical milestone of global cumulative installed capacity reaching 10GW in January 2017; two months later its tracker products' performance outperforms all other Chinese manufacturers, setting it to the same table with international leading tracker manufacturers. Its strength could never be overestimated.

Mr. Guy Rong, President of Arctech Solar's international business division commented that, "the year of 2017 is the first year that Arctech Solar starts to internationalize development and we proved our international competitiveness by a series of numbers only after the first quarter. The most significant differentiator for Arctech as against other tracker suppliers lies in that Arctech is not only a manufacturer for tracking products but also a supplier for tracking and racking system solutions, which means we have broader arena and richer product portfolio to serve our global clients. The cumulative installed capacity of 10GW all across the world proved that Arctech is a trust-worthy partner. Arctech is actively facilitating its internationalization process and wish to provide better products and solutions for customers in more countries and regions.

【About Arctech Solar】

Arctech Solar is one of the world's leading manufacturers and solution providers of solar tracking and racking systems. Through 8 years of development, Arctech Solar has set up manufacturing bases in Kunshan and Changzhou in China and also set up subsidiaries and service centers in many

country regional markets such as America, Japan, India, Europe and Shanghai. Arctech Solar has cumulatively installed 10GW and completed almost 600 projects in more than 10 countries. With a production capacity of 6GW and 3GW respectively in fixed mounting structure and tracker fields (a total annual capacity of 9GW), Arctech Solar has grown into a reliable partner in the global PV tracking and racking system field.
