

## **RECOM and NextEra Energy opens 4 MW PV installation in New York**

In a commemorative ceremony on June 20, 2019, NextEra Energy and RECOM Solar celebrated the completion of Kings Park Solar Project at Kings Park, New York. The installation provides a capacity of 4 MW, being able to supply the annual electricity demand of up to 5,000 Americans.

RECOM, one of Europe's largest PV module manufacturers and independent power producer (IPP), as part of its larger plan to expand presence and exposure in the United States took full ownership of Kings Park project's rights in mid 2018 and soon after sold it to NextEra Energy Resources. The 18,360 PV modules utilized in the solar project are 325Wp Mono panels manufactured at RECOM's French facility.

“We are truly happy to see this project comes to a fruition and serve the community,” says Hamlet Tunyan, the CEO of RECOM. “We look forward to similar joint efforts with our partners in the future as we expand our presence in the US and contribute to the spread of renewable energy.”
