

REXEL trust RECOM panels as the best choice to power up their main French warehouse

REXEL, one of the largest electrical supply distributor and sustainable energy management provider, installed RECOM PV panels on their main warehouse to contribute to their suitability goals.

As an eco-efficient solutions provider, REXEL is helping its customers consume less and better with innovative range of products and services to optimize energy performance across residential, industrial and tertiary infrastructures.

RECOM and REXEL share the commitment to make renewables as the main source of energy and contribute to fighting against the global climate change with investing in R&D, innovations and partnering with other companies and research institutions.

Both companies operate worldwide and practice their values towards sustainability across the whole supply chain.
