

## Press Release

**Strong partnership performance in PV development**

### **First Trianel solar park in Bavaria goes into operation**

**February 24, 2022, Aachen, Theinfeld.** The municipal project developer Trianel Energieprojekte GmbH & Co. KG (TEP) is commissioning its first ground-mounted photovoltaic project in Bavaria, the Theinfeld solar park.

The project is located in the district of Bad Kissingen in Thundorf in Lower Franconia. On an area of 12 hectares, 26.375 solar modules with 450 W<sub>peak</sub> or 455 W<sub>peak</sub> each were installed, reaching a total output of 12 MW<sub>peak</sub>.

Bavarian engineering service provider MaxSolar served as the general contractor. "The unproblematic cooperation in Theinfeld shows how quickly a project can be implemented when all parties involved pull together," said Enrico Makkay of MaxSolar GmbH.

"Together with our partner, we implemented this large project very quickly and professionally. We say thank you to the local authorities and the municipality, who have been very constructive throughout the whole process," emphasizes Markus Eder, project manager at Trianel.

Due to the new possibilities of § 6 EEG, Trianel will also give the municipality of Theinfeld a share of 0.2 cents per kilowatt hour for the amount of electricity actually fed into the grid. For the municipality in the district of Bad Kissingen, the share of two megawatts of installed capacity awarded in 2021 will result in an annual subsidy of up to €4.500 for the next twenty years, according to the solar plant's yield forecasts.

The solar park will be able to supply more than 3.500 households annually with climate-neutral electricity at an average annual consumption of 3.500 kWh.
